

Probe. Chart. Educate. Motivate.

FLORIDA PROBE
Periodontal Probing & Charting Systems

Assess Perio Risk

The Risk Assessment Screen helps the patient understand the connection between the perio exam data and their total body health. It calculates a patient's risk of periodontal infection or reinfection based upon *their* specific risk factors, including smoking habits, age, oral hygiene, medications, etc. and assigns the patient a **Low**, **Medium**, or **High** Risk score.

Keep Better Records

The Periodontal Screen and resulting chart printout can be used by the clinician as a "treatment map" to quickly identify areas needing adjunctive therapies or to easily compare previous exam visits to keep track of patient progress.

Better Dentistry

What Is It?

Our FP32 Software. The best periodontal charting software on the planet. Simply put, it's the core of both our **Florida Probe** and **GoProbe Systems**.

What Does It Do?

It allows you to **Probe, Chart, Educate** and **Motivate** your patients to care about their perio health. Sounds and images generated from the software during the exam engage the patient in a high-tech, **co-diagnosis** experience that educates and motivates them to be compliant with recommended therapies.

How Does It Work?

During the exam, the "talking" software simultaneously calls out, displays, and records pocket depths and other perio exam information for the patient and clinician's benefit.

Personal Page

Tooth History

Customize Your Exam

The exam can be customized to record all or some of the following: dentition, medical history, risk assessment, recession and hyperplasia, gingival attachment, pocket depth, bleeding, suppuration, plaque, mobility, MGJ, and diagnosis.

Improve Patient Health

Increase patient acceptance of periodontal therapies for a disease that has few typical or motivating symptoms (pain, aesthetics). Therapy can begin in the earliest stages of the disease, often preventing early bone loss, surgery or serious complications from systemic disease (including death from cardiovascular disease or diabetes).

Practice Benefits

Increase Productivity

The System acts as your computerized assistant for the periodontal exam - **only one examiner required**. This increases office productivity, because you won't need other staff members to chart while you are probing.

Protect Your Practice

Use the **periodontal chart** to create a "treatment map" for scaling and root planing, subgingival antimicrobials or even laser use. When combined with the **patient diagnosis sheet**, the duo becomes a legal record and informed consent to protect your practice and reduce legal exposure from the number one lawsuit in general dentistry.

Generate New Hygiene Revenue

One more quadrant of scaling and root planing acceptance per day at \$250/Quadrant, working a 4-day week, adds \$50,000 per year in production. This is only the beginning: 3-month re-care, adjunctive therapies and diagnostic fees add to this hygiene-driven increase. Active Florida Probe offices routinely increase hygiene and perio production by \$10,000 per month.
